SECTION 1: Finding your Community folder

If you haven't yet installed an addon for MSFS, you may not be familiar with the file system.
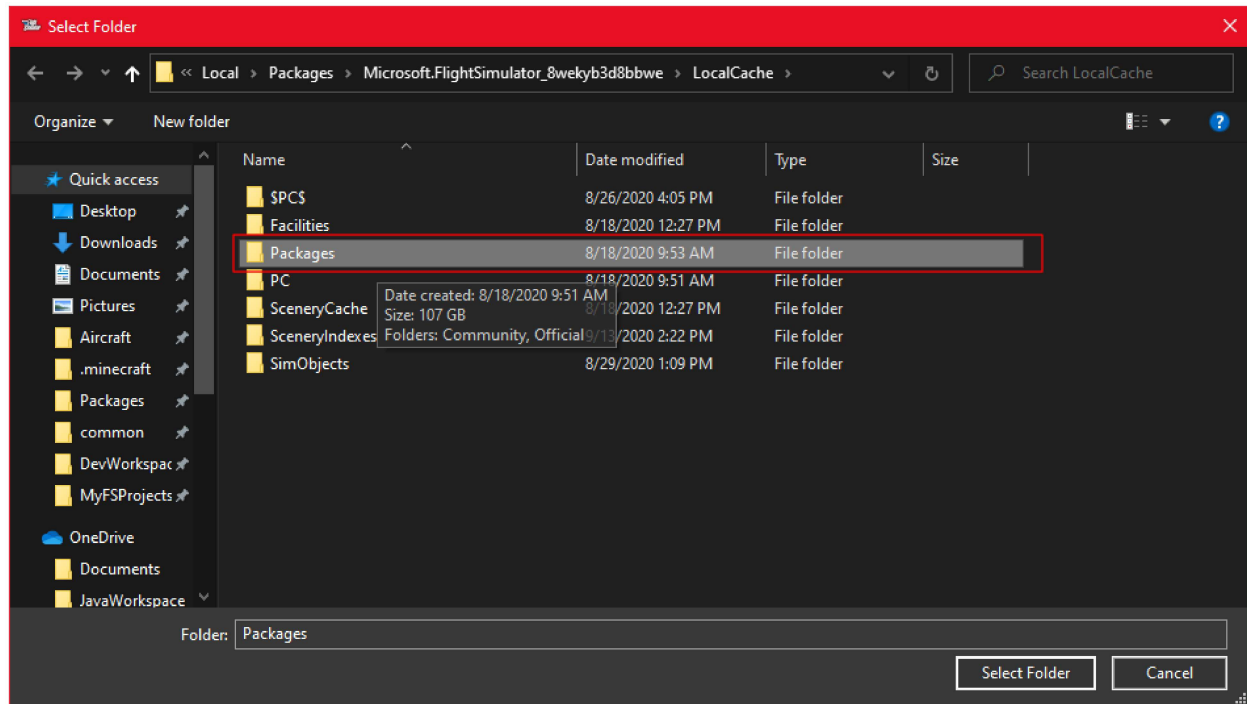

Addons for MSFS are always copied to the "Community" folder, but as MSFS is a Windows Store App, this may be difficult to find by yourself.

Here's the easy way. (this should work regardless of whether you are using the Windows Store or Steam versions.
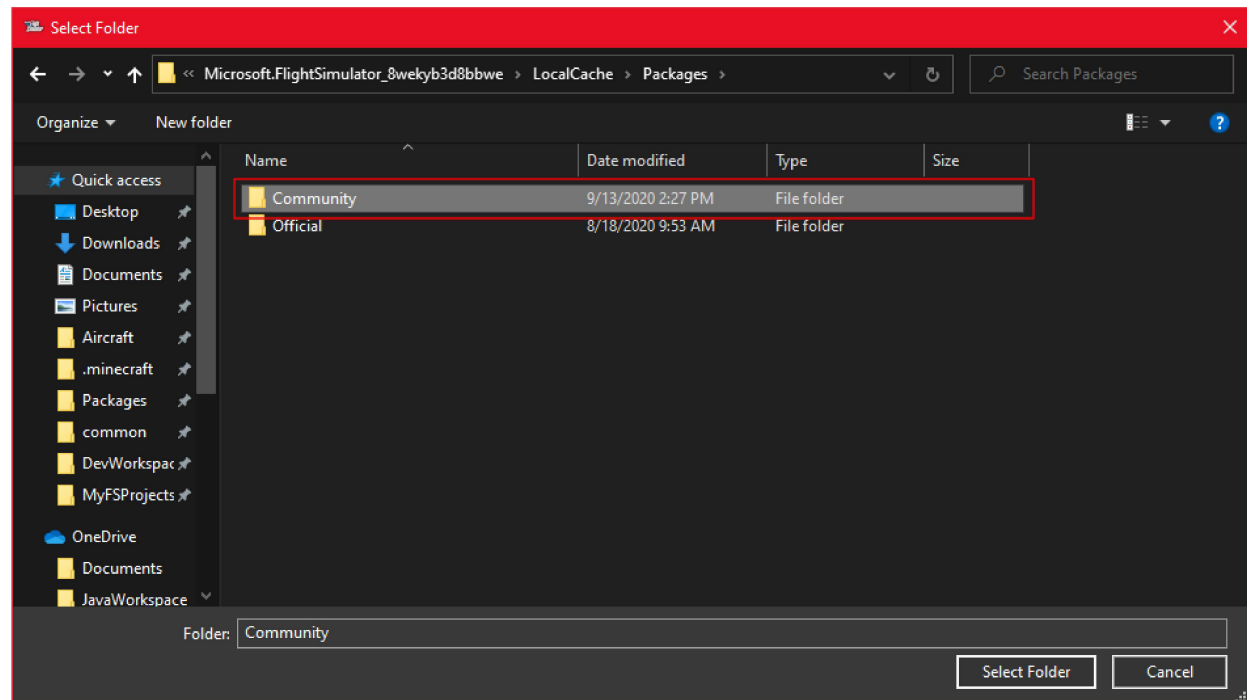

First, open your sim and navigate to Options > General > Data, and click on the displayed file path for "Rolling Cache Path":

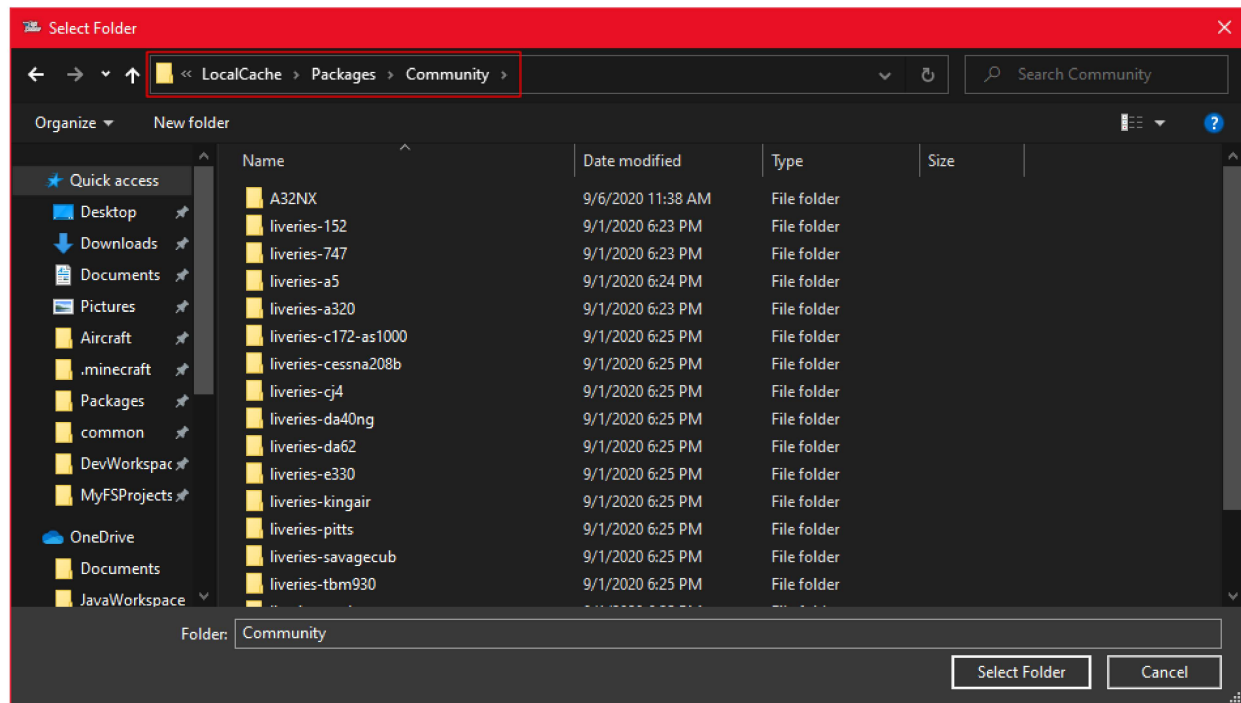

Next, select the "Packages" folder:

Now select "Community":

The Community folder is where you'll put all of the addons you download for MSFS. If you think you'll be doing this often, I would recommend pinning it to quick access.

SECTION 2: Installing from dev version (cloning latest master branch)

You can get to the latest release from the main page of the GitHub on the sidebar:

Releases

3 tags

Create a new release

Under the latest version number, click the "Assets" dropdown and select the ZIP file:

Assets 3
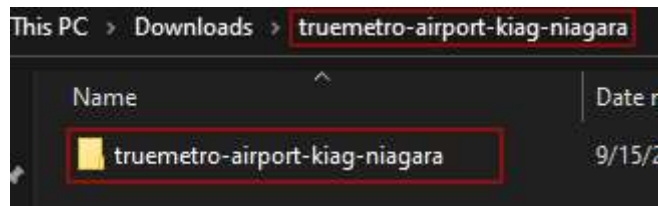

truemetro-airport-kiag-niagara.zip
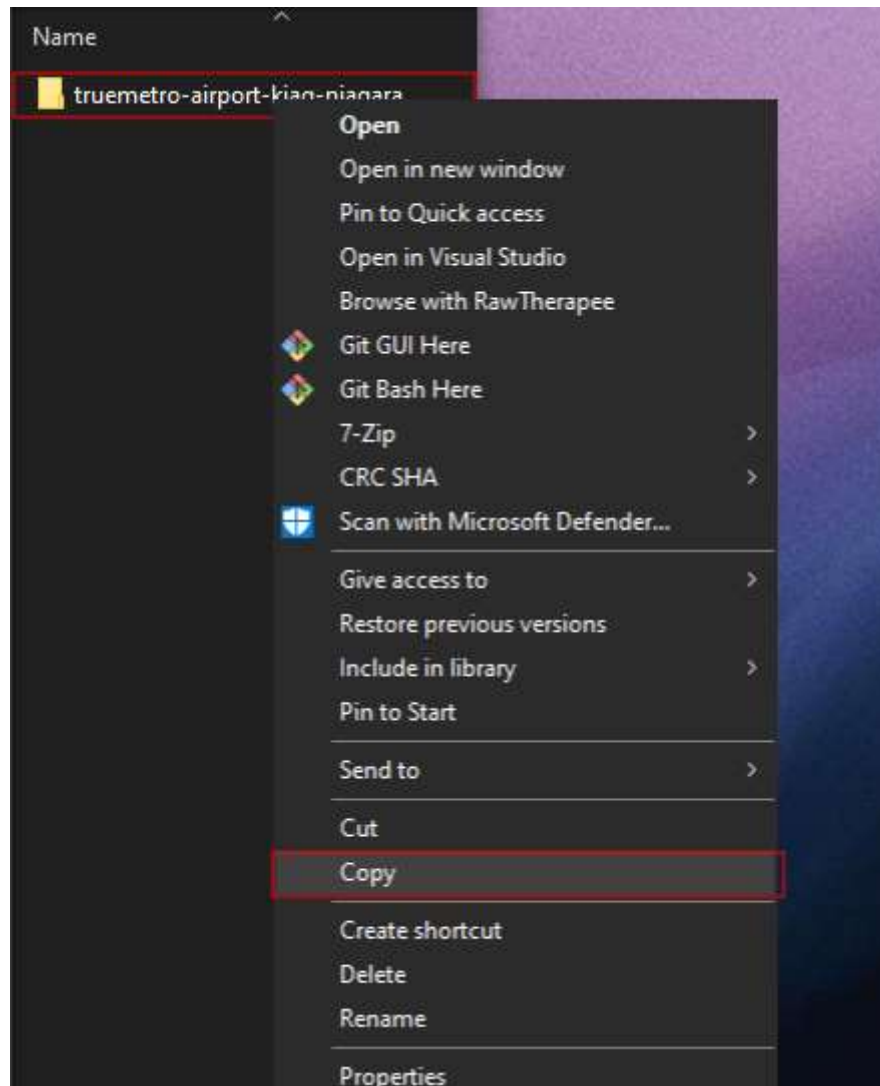

Source code (zip)

Source code (tar.gz)

Once downloaded, extract the ZIP file:

Open the resulting file (note the duplicate filenames, you need to copy the contained folder, not the extracted one)

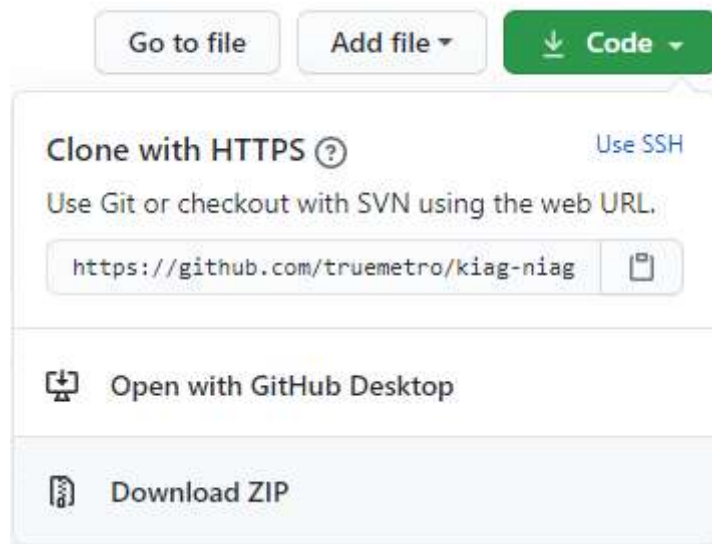

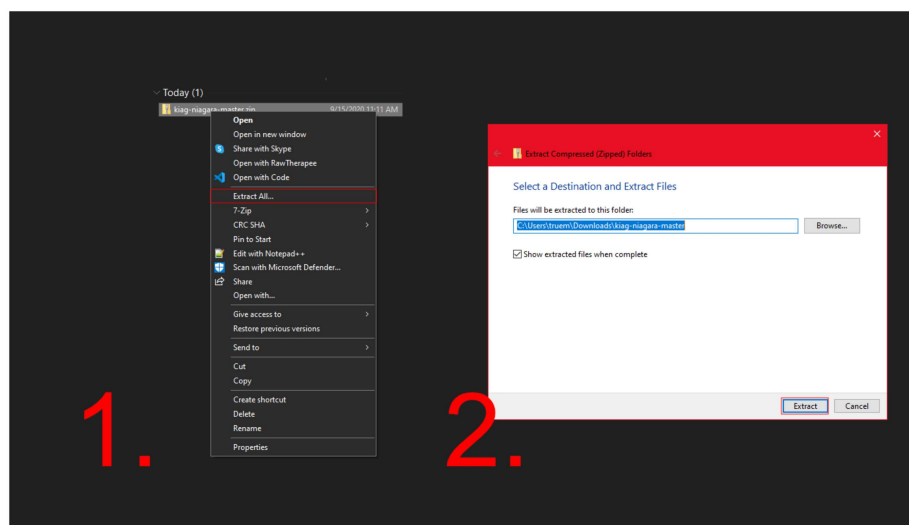

Copy the folder:

Paste into the Community folder as shown in Section 1.

# SECTION 3: Installing from dev version (cloning latest master branch)

To install from the latest master branch select the green "Code" button on the front page of the kiag-niagara GitHub and choose "Download ZIP" from the resulting dropdown.

Once downloaded, extract the ZIP file:

In the extracted folder, go to kiag-niagara-master\airport-kiag-niagra\Packages and copy the contained folder:

Paste it into the "Community" folder as shown in Section 1.
